

## CAMP BRAVO COVID-19 INFORMATION

We will be following the most up to date protocols for COVID-19 safety. This includes wearing masks, socially distancing, hand sanitizer stations and daily disinfection of surfaces.

Campers will be split into small groups (cohorts) that will remain together for the entire camp session. To mitigate risk associated with housing, this includes sleeping arrangements. Parents will choose to have their child housed in a single, double, or triple occupancy room within the cabin. Camp Bravo will not be assigning campers in a double or triple occupancy room unless the parent has given consent and named the camper(s) they wish their child to share a room with.

### **Before Camp**

All Camp Bravo staff (administrators, teachers, and counselors) will be fully vaccinated prior to the start of camp.

If eligible, campers should get fully vaccinated for COVID-19 and ideally, wait 2 weeks after completing vaccination for COVID-19 before traveling to camp. Vaccinated campers will be required to provide proof of vaccination prior to arriving at camp.

We request that campers, their families, and camp staff follow guidance for travelers in the 14 days before camp arrival to reduce exposure to COVID-19. We ask that unvaccinated campers engage in a 2-week pre arrival quarantine that includes physical distancing, mask-wearing when not at home, avoiding unnecessary travel, and refraining from indoor social gatherings with people outside of their households.

Campers who are not fully vaccinated must provide proof of a negative viral test taken no more than 1–3 days before arriving at camp.

CDC does not recommend getting tested again in the three months after a positive viral test if the person does not have symptoms of COVID-19. Campers who have had a positive viral test in the 3 months prior to starting camp and have met the criteria to end isolation should have a letter from their healthcare provider documenting the positive test date and stating the individual is cleared to end isolation.

Please refer to the CDC's Travel During COVID-19 page for more details about preparing to travel, including recommendations about staying safe during travel such as wearing a mask in public settings.

## **During Camp**

Campers and staff will receive a temperature check and be screened for COVID-19 symptoms, as well as any known recent close contact with a confirmed COVID case, when entering the camp.

Upon arrival at camp, campers will be assigned to cohorts that will remain together for the entire camp session. Campers and staff who are staying together in a cabin will be considered a “household cohort.” Household cohort members do not need to wear masks or physically distance when they are in their own bedrooms.

When different household cohorts are using shared indoor or outdoor spaces together during the day or night, we will continue to monitor and enforce mask use, physical distancing, and healthy hygiene behaviors for everyone.

Staff will conduct daily temperature checks and symptom checking to monitor the health and well-being of camp staff and campers during the camp session.

Campers must bring enough masks (disposable or reusable cloth) to last them the duration of camp. We suggest one per day plus a few extras. We will have extra disposable masks on hand as needed.

The camp facility will provide an isolation room or area to separate anyone who exhibits COVID-like symptoms. Staff or campers with symptoms will be isolated immediately, and referred for viral testing. They will remain isolated until the test result is returned. If the test result is negative, the person will remain in isolation until his or her symptoms have improved (typically, 24 hours without fever and no use of fever-reducing medication). If the test result is positive, the camper’s parents will be notified and will need to make arrangements to pick up their child.

If campers or staff receive a positive test result for COVID-19, all unvaccinated members of the household cohort will be quarantined as a cohort and referred for testing. Fully vaccinated asymptomatic people within the household cohort should still be referred for testing, but can refrain from quarantine per CDC’s guidance for fully vaccinated people in congregate settings. They should still monitor for symptoms of COVID-19 for 14 days following an exposure. If they experience symptoms, they should isolate themselves from others and be clinically evaluated for COVID-19, including testing, if indicated.
